

Belts for Rollermill

产品介绍

- 橡胶齿楔带是单面同步带与多楔带结合而成的双面传动带。同时具有同步带与多楔带的优点，极大的增加了皮带的使用寿命。主要应用于谷物加工机械。凯一同步带公司可提供规格齐全的橡胶齿楔带和双面多楔带。

Product Introduction

- This belt for rollermill combines two of product technologies. On one side the belt has a tooth profile of synchronous belt, and on the other side, it has a profile of ribbed v belt. This combination of both timing and friction technology is required to mill grain into fine flour quality. It combines the best of two worlds: optimized efficiency from a synchronous drive and ability to slip when blocked or overloaded from a ribbed v belt drive, where regular synchronous belts would break, when this occurs.

Structure

- Neoprene body** ①
provides protection against oil, grease, heat and aging.
- Glass Fiber cord** ②
provides high strength, good flexing performance, and low elongation.
- Nylon fabric tooth facing** ③
provides resistance to abrasion and tooth shear.

结构

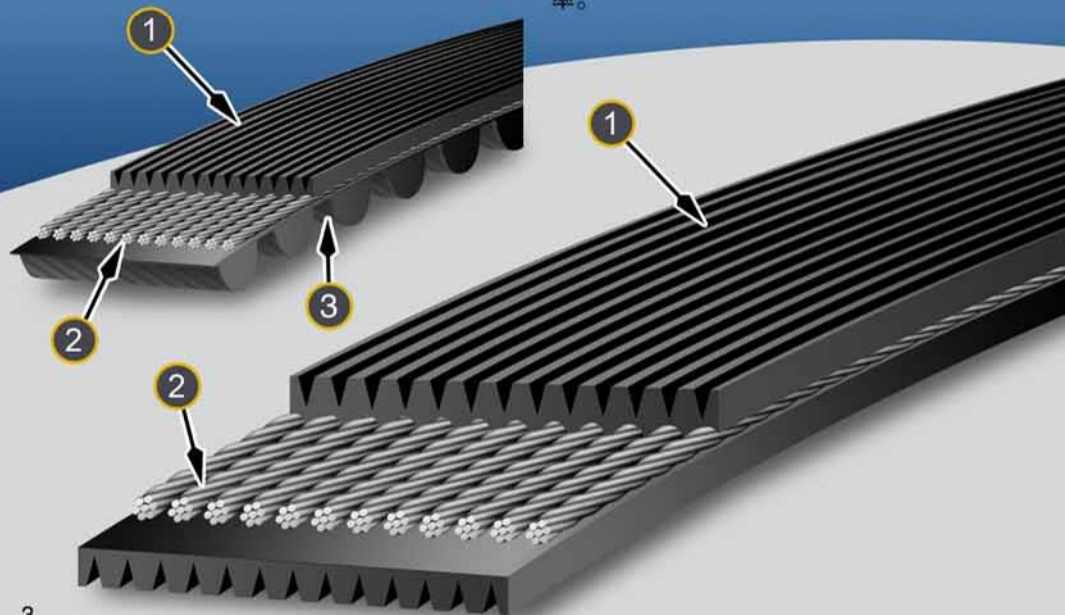

氯丁橡胶带身
• 具有良好的耐油脂，耐热和耐老化性能。

玻璃纤维张力层
• 具有高强度，良好的耐屈挠性能和低伸长率。

齿面尼龙布
• 提高了齿的耐磨损性和抗剪切强度。
